

ANNOUNCEMENT OF THE INTRODUCTION OF NEW MASTER'S DEGREE PROGRAMMES

The Department of Health Systems Management at Mzumbe University is pleased to announce the introduction of new Master's degree programmes for the 2025/2026 academic year. We warmly invite prospective students, health sector professionals, and valued stakeholders to explore and apply to these innovative postgraduate offerings.

These newly designed Master's programmes are the result of a comprehensive curriculum review of the existing Master of Science in Health Monitoring and Evaluation. The review process was guided by current trends and demands in the health sector, ensuring that our graduates are well-equipped to respond to evolving challenges and opportunities in health systems management. Furthermore, this initiative aligns with the regulatory requirements set forth by the Tanzania Commission for Universities, which mandates higher learning institutions to review and update their curricula every three years in order to maintain academic quality and relevance.

The following Master's programmes will be available beginning in the 2025/2026 academic session:

- **Master of Science in Health Monitoring and Evaluation (Coursework & Dissertation):** This programme combines advanced coursework with the development of a dissertation, aimed at equipping students with critical analytical skills and practical competencies in monitoring and evaluating health programs and interventions.
- **Master of Science in Health Monitoring and Evaluation (Dissertation & Publications):** Tailored for individuals seeking a research-intensive experience, this programme emphasizes the production of high-quality research outputs in the form of a dissertation and peer-reviewed publications.

MSC. HEALTH MONITORING AND EVALUATION (MSC. HME) - DISSERTATION AND PUBLICATION(S) TRACK NEW

Already in the Field? Turn Your Experience into a Master's Degree.

This track is designed for professionals with a basic understanding of monitoring and evaluation. Skip the coursework and focus on research and publication. Ideal for mid-career professionals seeking to publish and advance their careers.
